

Task - 02 : Wireframe designing for Health care application

SURGICALSTER

Connect Prepare Recover

problem statement

creating a wireframing for any mobile application

solution

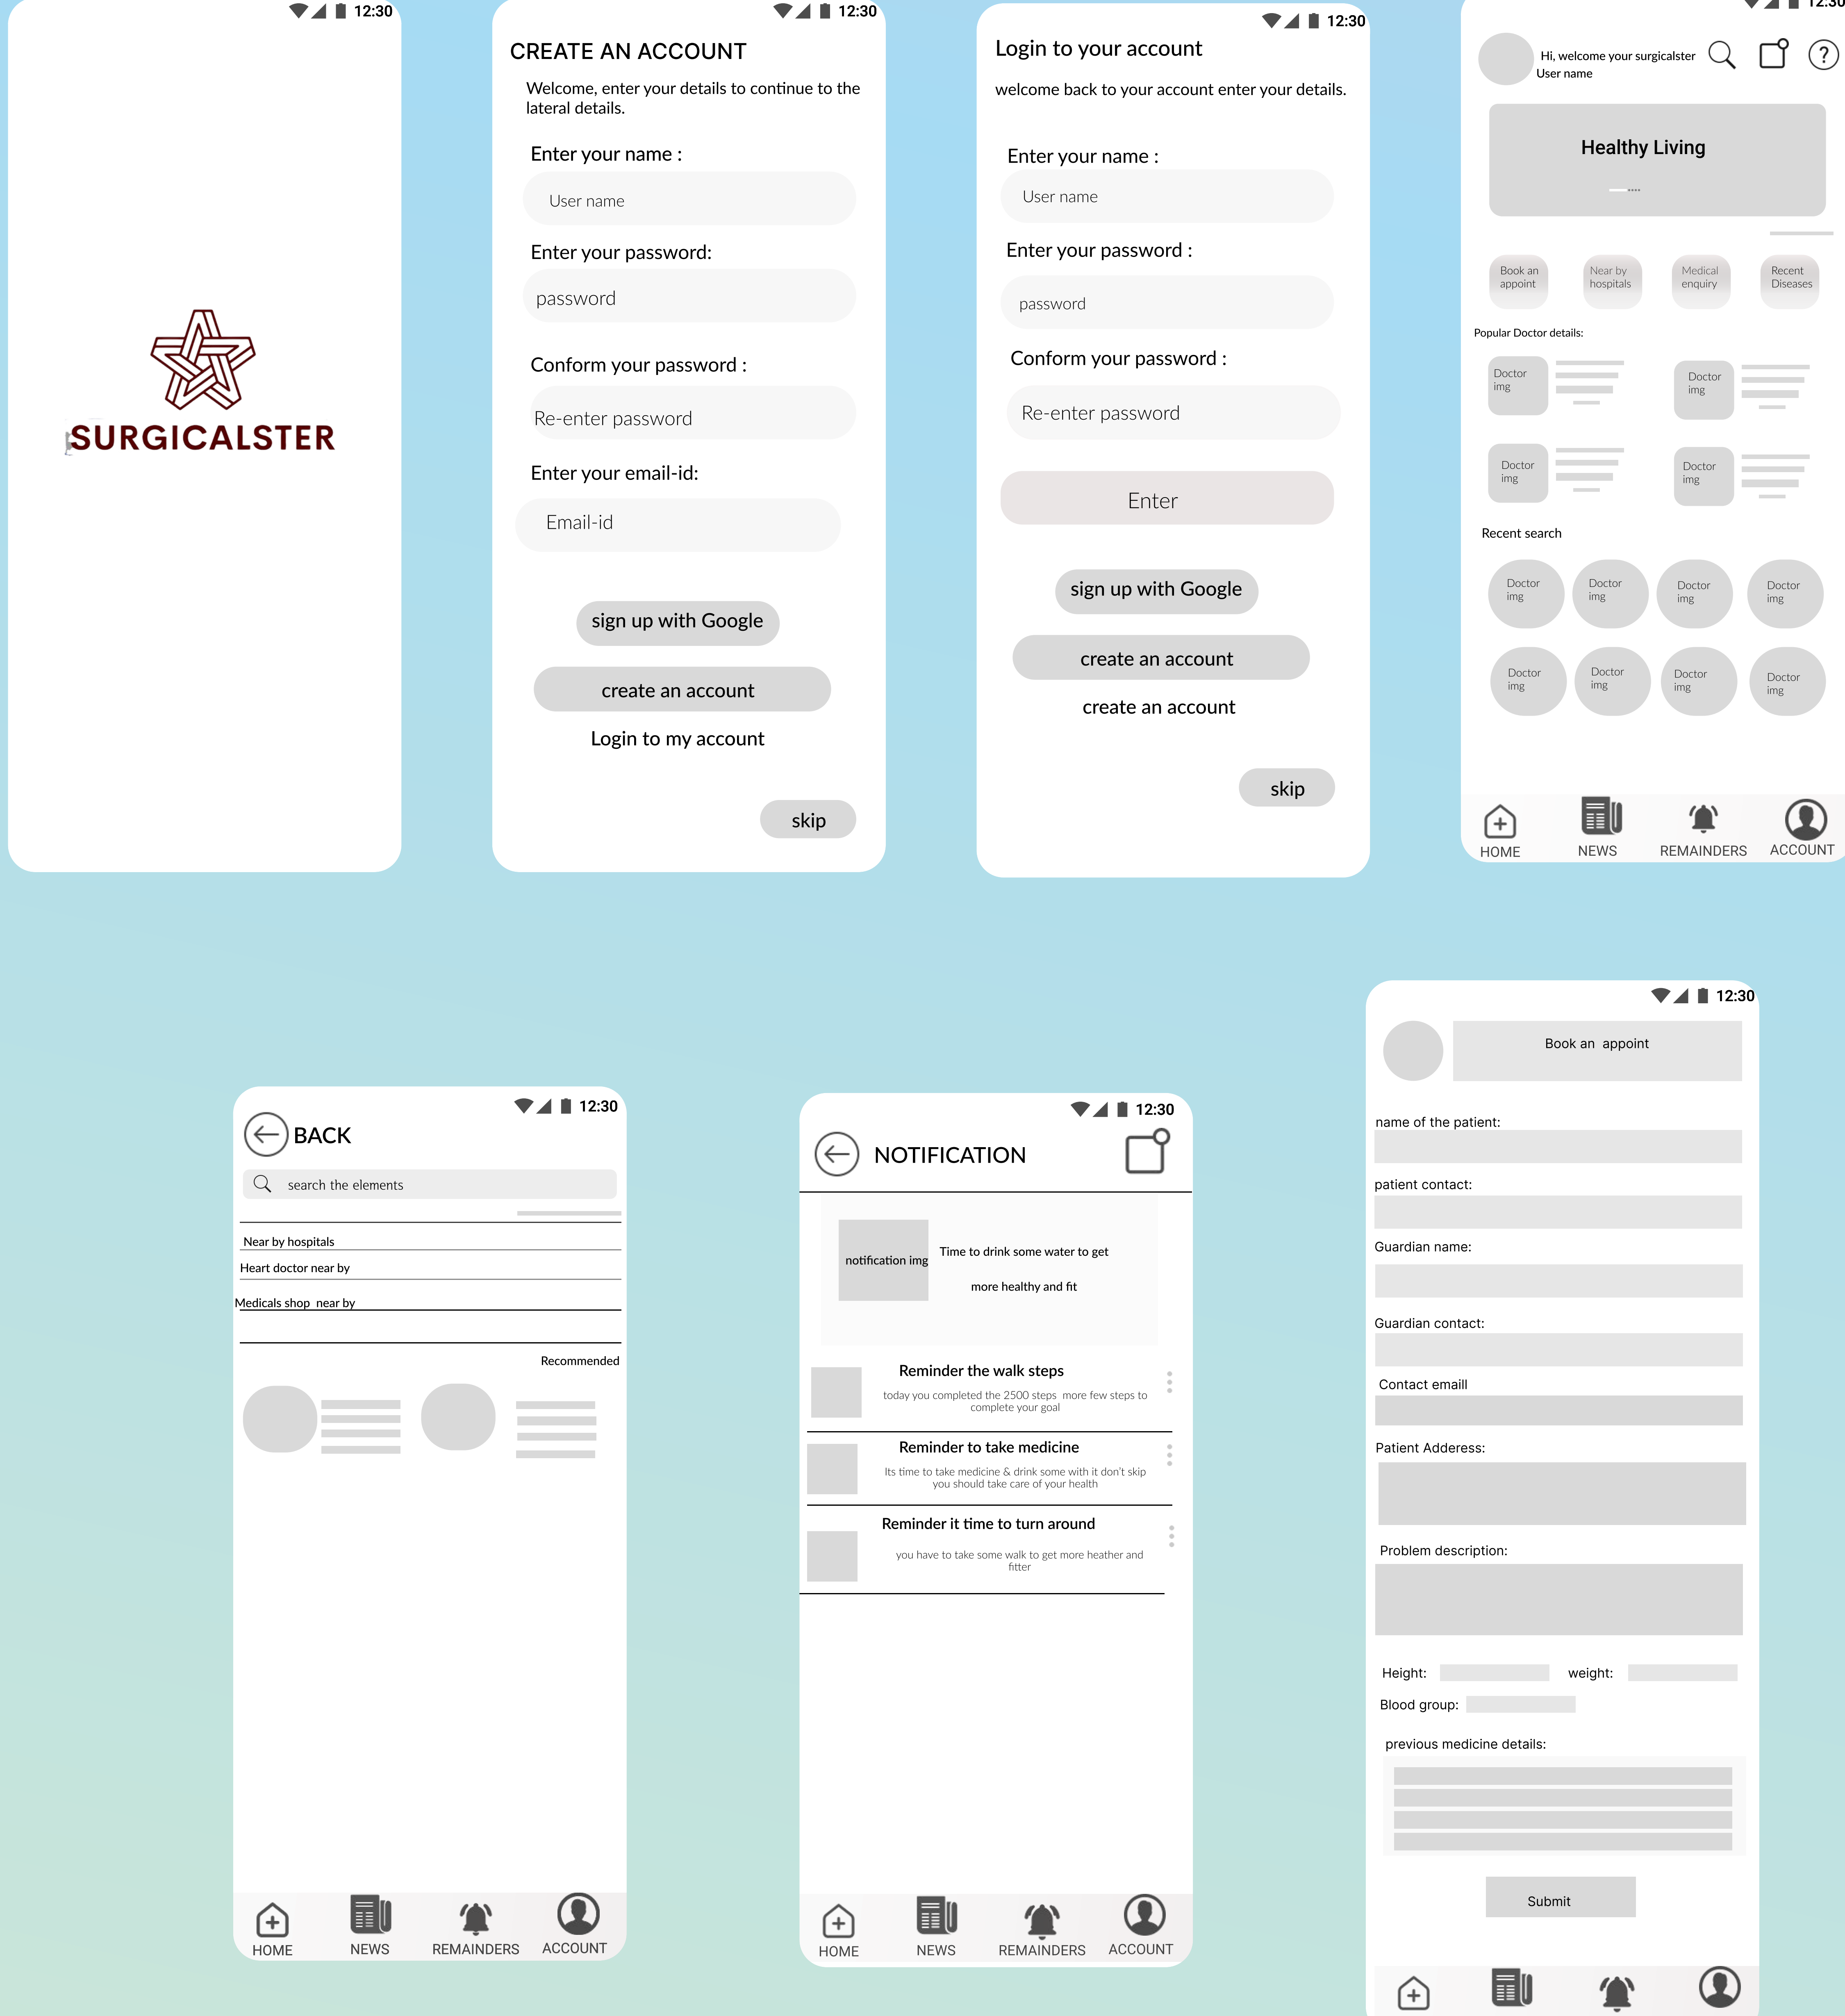

Lateral usage of many apps I found solution for the problem so that i created a wireframe for hospital application.

ABOUT THE PROJECT

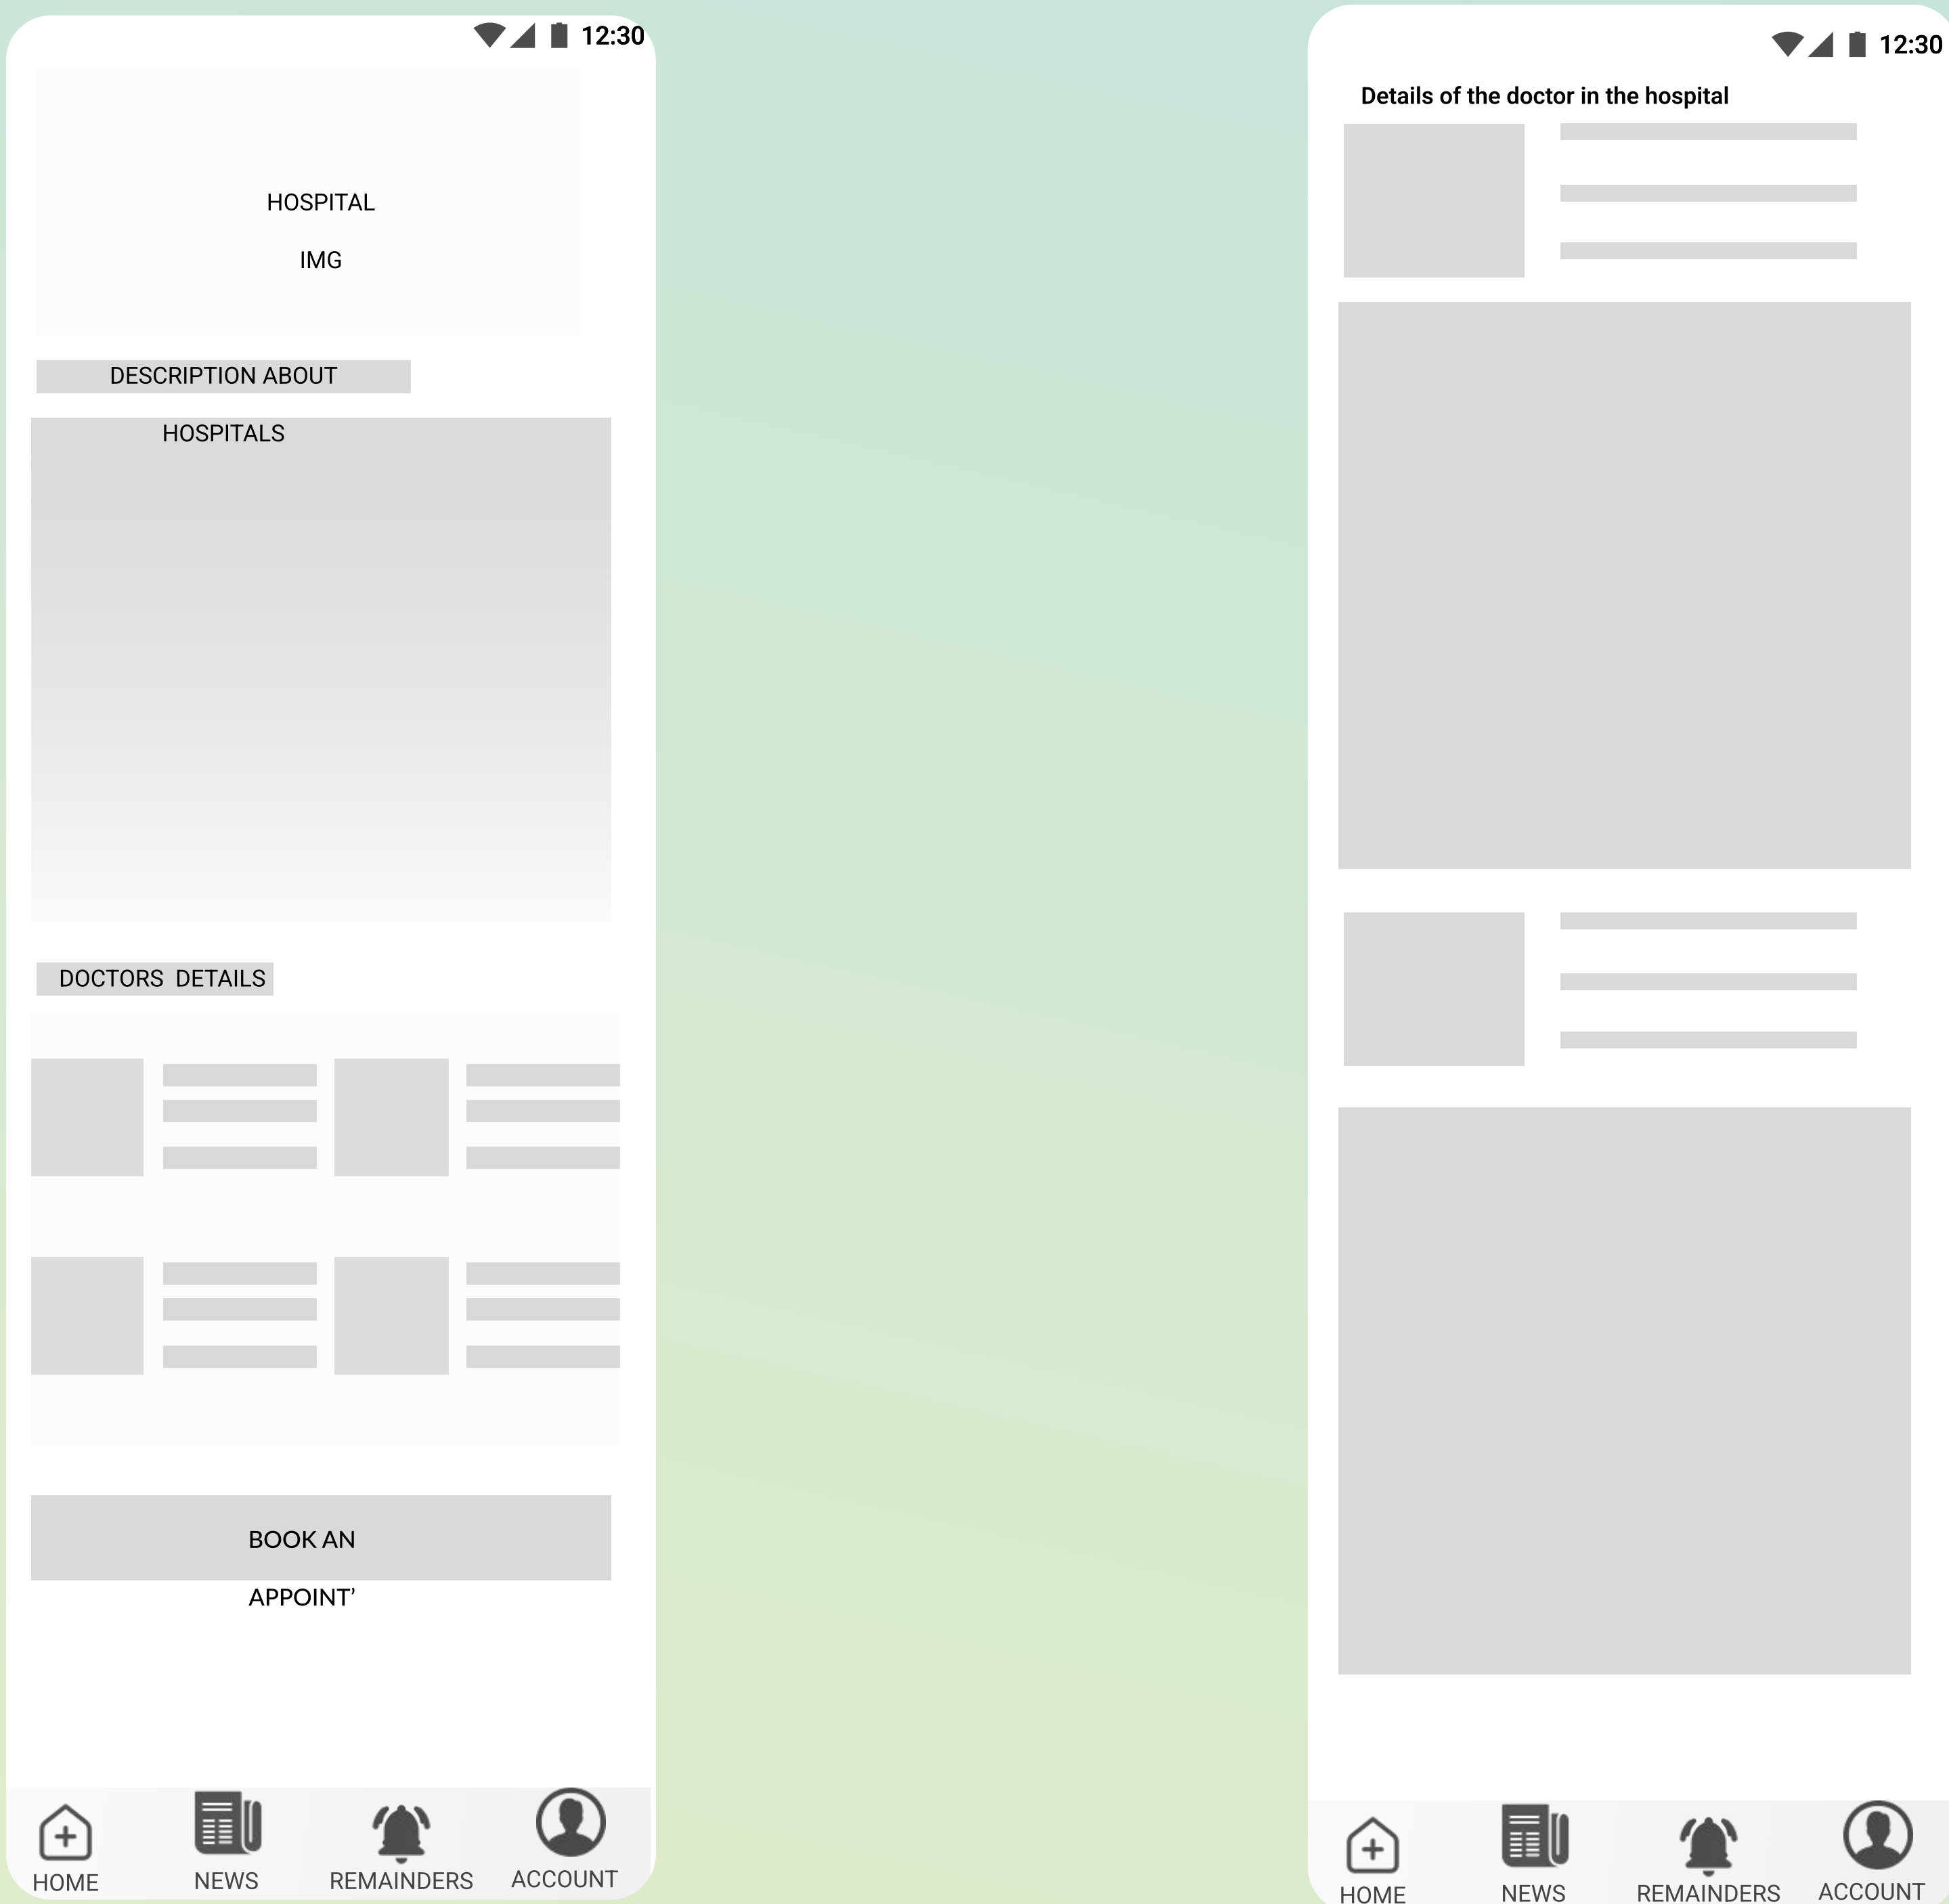

In the world of design, wireframes serve as the architectural blueprints for web pages or app interfaces. They strip away colors, visuals, and specific content, focusing solely on structure and functionality. As a UI/UX designer, I'll create two-dimensional skeletal outlines that outline page layouts, information architecture, and intended behaviors. These wireframes allow stakeholders to align on information placement before developers start coding the interface.

wireframes

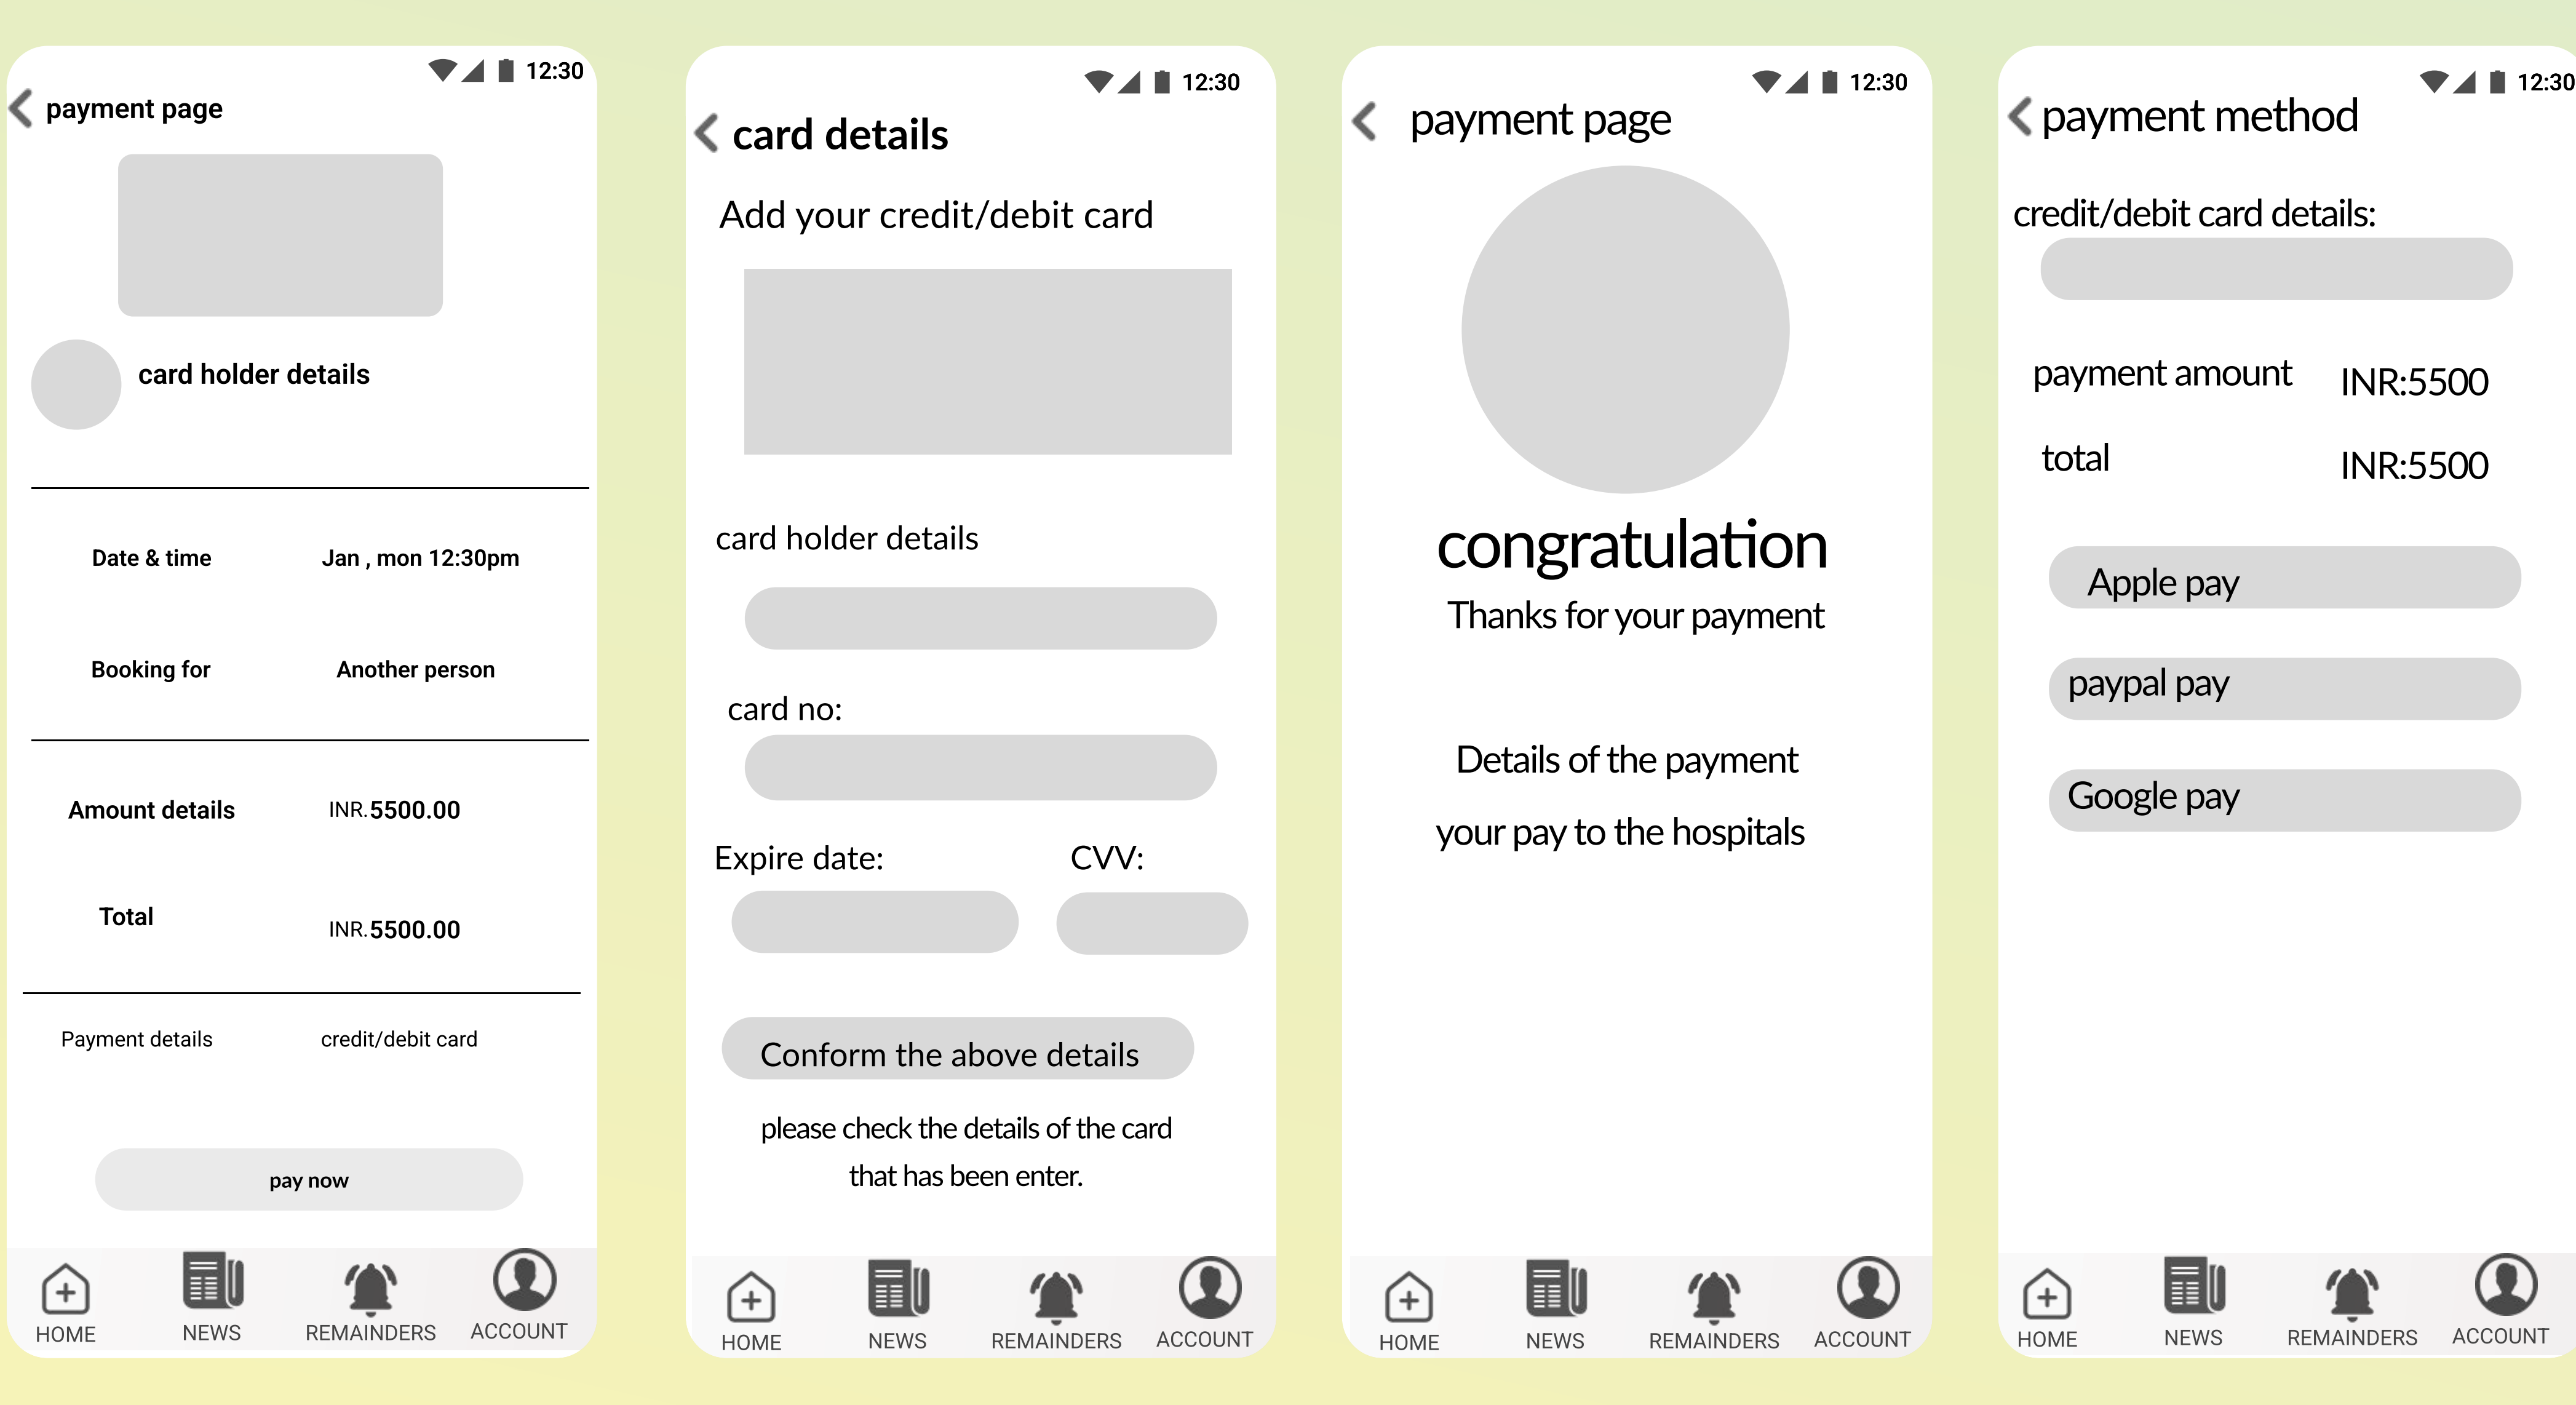

Interface of opening the app

Hospital & Doctor Info Pages

payment pages

THANK YOU.....
